This unique reference book describes quantitatively the measured and predicted values of all the physical properties of mammalian tissue. Reported measurements are thoroughly documented and are complemented by a range of empirical mathematical models which describe the observed physical behavior of tissue.\*\*Intended as a broad-ranging reference, this volume gives the bioengineer, physicist, radiologist, or physiologist access to a literature which may not be known in detail. It will also be of value for those concerned with the study of a range of environmental radiation hazards. Most extensive compilation of values of physical properties of tissue\*\*Presents data for thermal, optical, ultrasonic, mechanical, x-ray, electrical, and magnetic resonance properties\*\*Comprehensive bibliography
