By Max Powers Costanzo is a staple in medical physiology. I use this big Costanzo for my first passes on topics in class and supplement with BRS (baby) physiology around exam time. For USMLE step 1 prep, BRS has been part of many people's success. Using big Costanzo will make BRS consolidation much easier. There are, however, entire topics that are omitted from BRS (i.e. countercurrent multiplier details) which are most likely a reflection of their unimportance for boards. It is to the point and concise when compared to the likes of other more cumbersome medical physiology texts (Hall, etc.). 1 of 1 people found the following review helpful.
