**Kim Mulholland, Martin W Weber : Pneumonia in Children: Epidemiology, Prevention and Treatment** before purchasing it in order to gage whether or not it would be worth my time, and all praised Pneumonia in Children: Epidemiology, Prevention and Treatment:

Expertly written and aimed at doctors, other senior health workers and all those interested in public health approaches to pneumonia, Pneumonia in Children is set to become a standard text on the subject. The authors present all aspects of

pneumonia and its control in children. It outlines the epidemiology and aetiology of pneumonia and its risk factors. It shows the current clinical guidelines as promoted by WHO for both inpatient and outpatient care in health centres and small hospitals, with focus on developing countries and use of basic laboratory facilities and essential drugs. Chapters discuss the role of the new vaccines in the prevention of pneumonia. The book highlights the shortcomings of pneumonia control and how current approaches have problems to reach the most vulnerable populations, suggesting ways how to remedy this situation. In this way it contributes to better pneumonia control in the context of a global action plan for pneumonia and diarrhoea, and in child survival initiatives.

**About the Author** Kim Mulholland is an Australian paediatrician. He is currently Professor of Child Health and Vaccinology at London School of Hygiene and Tropical Medicine and holds professorial posts at Murdoch Childrens Research Institute in Melbourne, and Menzies School of Health Research in Darwin. Martin W. Weber is a paediatrician with a PhD in epidemiology. He was one of the initiators of the Global Action Plan for Pneumonia. He is currently the Regional Adviser for Maternal and Reproductive Health in the WHO Regional Office for South-East Asia.
