David L. Kirchman : Processes in Microbial Ecology before purchasing it in order to gage whether or not it would be worth my time, and all praised Processes in Microbial Ecology:

Processes in Microbial Ecology discusses the major processes carried out by viruses, bacteria, fungi, protozoa, and other protists in freshwater, marine, and terrestrial ecosystems. Written by one of the leading scientists in the field, the text focuses on biogeochemical processes, starting with primary production and the initial fixation of carbon into cellular biomass, before exploring how that carbon is degraded in both oxygen-rich (oxic) and oxygen-deficient (anoxic) environments. The book neatly connects processes occurring at the micron scale to events happening at the global scale, including the carbon cycle and its connection to climate change issues. A final chapter is devoted to symbiosis and other relationships between microbes and larger organisms. Processes in Microbial Ecology is an ideal

text for advanced undergraduate and graduate students in microbial ecology and related fields.***Available for purchase in hardback***Order ISBN: 978-0-19-958693-6Price: \$99.00
