**M. Girard, B. Dodet : Retroviruses of Human AIDS and Related Animal Diseases** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Retroviruses of Human AIDS and Related Animal Diseases:

Paperback. The 12th Colloque de Cent Gardes focused on the work being accomplished in vaccine strategies, which could lead to stronger and longer-lasting immune responses. Sixty clinical phase I and II trials using 30 candidate

genes have already taken place. The first phase III trials are underway. The Tat protein has received special attention. This book contains as well the encouraging results in monkeys of the combination of vaccination with highly active antiretroviral therapy (HAART).
