This is a review text on medical microbiology and immunology containing approximately 625 board-type review questions on left-hand pages with answers and explanations on facing right-hand pages. It is designed for medical

students taking microbiology as well as for those studying for Step 1 of the National Board Exams and is also useful for Step 3 National Boards on infectious diseases or allergy and immunology. The book's main sections cover general and medical microbiology, bacteriology, virology, immunology, and parasitology. The answers summarize relevant information and point out the fault in incorrect answers. Line drawings and figures are used for questions concerning structure of both molecules and organisms and for interpreting graphical results. Authors Reese, Brownell, and Nair, all with the Medical College of Georgia, bring a combined total of some 85 years of medical school teaching experience to their development of the questions and annotated answers for this book.
