Written by leading experts on growth factors and bone cell biology, this volume is an in-depth review of the biological actions and clinical significance of the various growth factors secreted by bone cells. The contributors describe the biological role and regulation of each growth factor, examine its function in skeletal development and maintenance, and discuss its relevance to specific clinical disorders. Full consideration is given to the role of growth factors in the

pathogenesis and therapy of metabolic bone disorders. Concluding chapters explore the use of growth factors in treatment of various bone diseases, including osteoporosis.
