Prof Igor Gamow : The Adventures of Mr. Tompkins and DNA before purchasing it in order to gage whether or not it would be worth my time, and all praised The Adventures of Mr. Tompkins and DNA:

Mr. Tompkins, the inquisitive bank clerk created in 1937 by esteemed physicist George Gamow--developer of the Big Bang theory of the origin of the universe--returns in a new series of "graphic textbooks"! Previously available only as part of The Adventures of Mr. Tompkins Volume Two, this issue finds Tompkins at Cold Spring Harbor Laboratory, where he learns from James Watson, Francis Crick, Alfred Hershey, and Martha Chase how DNA, the building blocks

of life, was discovered! Whether you are a budding beginner or seasoned scientist, *The Adventures of Mr. Tompkins and DNA* provides a feast of fantastic imagery and mind-expanding information! Igor Gamow, son of George Gamow, proudly brings his father's literary hero to the 21st century for a new audience. For thirty-seven years he was a professor of engineering at the University of Colorado in Boulder. He holds numerous patents in the field of bioengineering, including the Gamow Bag, a device that treats high altitude mountain sickness. Scorpio Steele, in addition to illustrating Mr. Tompkins' new adventures, has worked on Spider-Man and Iron Man projects for Marvel Comics, as well as art for the glam-rock band The New York Dolls.
