Decent, but incomplete tool for anatomy study By ktd This book helps, but some of the photos need to be more detailed and with more views, particularly of muscles and bones (e.g., sagittal, frontal, etc.) - not every view is given. This is a tool to add to your arsenal, but it's certainly not all you need to pass human anatomy. The best part is the self-tests at the end of the book, but those, too are incomplete. 1 of 1 people found the following review helpful. A little more simple than I needed, but great for quick review and memorization By Shazaam! This book is very good. It was a bit simple for my needs, but the format was very helpful and allowed me to solidify the memorization of the expanded basics using the workbook, coloring and text. The

coloring is much simpler than some of the other books out there--which I liked. I prefer this format to color in over the more detailed ones where I felt all I did was search to find the right color for the right spot versus this book where I could color and concentrate on studying the part focused on. Overall, I found this very useful and although it didn't have all the detail I needed, it did have plenty jammed into the pages. I found it to be a very useful tool. 0 of 0 people found the following review helpful. This book was recommended to me by a former Anatomy Physiology student. By The DavidGood study guide in addition to your standard class required textbooks. Contains larger more detailed pictures and tons of unlabeled self tests to help you study. Much cheaper than buying the study charts/test from the bookstore. I recommend picking up a decent used copy for the price of a large Starbucks! :)

Students preparing for careers in various medical professions will value this highly detailed and profusely illustrated reference guide. Fourteen chapters show, label, and define all human body regions and parts and describe physiological processes. The chapter titles are-- \* Body Overview \* Cells and Tissues \* The Skeletal System \* The Muscular System \* The Nervous System \* Special Sense Organs \* The Lymphatic System \* The Circulatory System \* The Respiratory System \* The Digestive System \* The Urinary System \* The Endocrine System \* The Reproductive System The book's fifteenth and final chapter provides students with a workbook that presents labeled line illustrations of the human body's muscle and skeletal systems. Students are encouraged to color in individual muscles and bones as an effective aid to memorizing the names and locations of each part. More than 500 color illustrations.
